Gap Analysis

The goal of a gap analysis is to review an organizations' security standing in relation to compliance guidelines. This paints a realistic picture of where the business currently stands and what steps they need to complete to become compliant.

2W Tech's gap analysis will provide the following information:

- Detailed information on every asset, including those not physically connected to the network.

- List of identified risks from misconfigurations, network vulnerabilites and user threats

- External and internal NMAP scans

- Dark Web ID results

- Vulnerability scan results

- Executive Summary document

- PS.Audit results

- Report on IT assessment findings including hard to detect issues found, measured risk, and recommended fixes

- Quote for appropriate remediation work (365 licenses, suggested MSP plan, SIEM & Switch) and potential hardware upgrades
